

**Male**

**Female**

## Caribou

### Habitat

- Caribou are animals that live very cold regions such as Northern Tundra, Canada, and even Alaska.

### Migration

- They do migrate in the fall to spend the winter in the south tundra.

### Diet

- Caribou are herbivores, so they mainly eat grasses and shrubs. Caribou are also known to eat fungi.

### Classifications

- The male caribou is called a Bull and the female is called a cow.

### Life cycle

- In September the male bull breeds with as many cows as it possibly can.
- Then the mates of the single caribou guard him from other challengers

### Hunting regulations

- Caribou are hunted from August to December.
- A caribou tag in Alaska for a nonresident is 85.00

### Fun fact

- Both male and female can have antlers.
